

Below are some specific items of interest about the trails included in the Monroe Mountain Snowmobile Complex. Check with local U.S. Forest Service offices for trail guides and travel maps of ungroomed trails and other areas open to snowmobile use.

Access to the complex is provided through four major trailheads. Services along these trails are limited, and snowmobilers should plan to take extra food and fuel with them.

Fish Lake is a natural lake formed when waters accumulated in a large fold in the earth's crust. The lake is located at an elevation of 8,800 feet, has a surface area of approximately 2,600 acres, and a maximum depth of 120 feet. Winter fishing opportunities are plentiful for those willing to brave the cold and ice. Trophy lake trout are caught in Fish Lake on a regular basis.

The Monroe Mountain Snowmobile Complex provides outstanding snowmobiling opportunities from December through March. Elevations reach 11,500 feet, making the scenic panorama breathtaking. Trails provide access to excellent winter scenery and enjoyable play areas. The rocky crags of Mt. Terrill, the vast expansion of the Fishlake high-tops and the Sevier Plateau, and the beauty of the Tushar Mountains offer excellent snowmobiling and are sights not soon forgotten.

**MONROE MOUNTAIN TRAIL (C)** — The 33-mile trail between the Sandledges and Montrovia Park trailheads is one of contrasts. Riders who choose to begin their journey at Montrovia Park are faced with a somewhat challenging climb to the top of Montrovia Mountain, home to some of Utah's premier big game herds. Though this ride offers some tremendous scenery, the trail passes through a steep narrow canyon and requires good riding skills. Access to the trail via the Sandledges Trailhead provides less advanced riders the opportunity to access Montrovia Mountain, though the trip takes slightly longer due to more gradual terrain. Once on top, several opportunities for open play are available and beautiful views of the surrounding valleys and mountains are found. Due to the low elevation and private property access in the Sandledges area, grooming is done to Big Lake.

**SANDELDGES/MT. TERRILL TRAIL (B)** — This wide, easy trail begins at relatively low elevation and climbs gradually to the summit of Mt. Terrill on the Fish Lake Hightop Plateau, where it joins with the Gooseberry Trail. This is an easier climb than is the Gooseberry Trail, and rewards riders with the same great exposure to play areas. The lower elevations of the eastern portion of the trail give riders the opportunity to see wintering deer and elk in their native habitats.

Trail is somewhat narrow in places and can be difficult and challenging for inexperienced riders. Once on top, expansive play areas reward those who make the climb. Beautiful scenery abounds and makes this one of the most popular in the complex.

Snowmobilers are urged to telephone the Avalanche Forecast Center for updated snow conditions and weather information before venturing into the backcountry.

- Let someone know where you're going and when you expect to be back. Never ride alone.
- Be familiar with your machine. Know its fuel capacity and basic maintenance procedures.
- Carry extra spark plugs, extra drive belt, a tool kit, and a survival kit.
- Watch your fuel supply. Ride out only to a point where your fuel gauge reads one-half; then follow your tracks back to the trailhead.
- Ride on the right side of the trail, giving the uphill bound machine the right of way. Be careful not to follow other snowmobiles too closely.

### SAFETY TIPS

MONROE MOUNTAIN COMPLEX	
A. Gooseberry/Fishlake	23 Miles
B. Sandledges/Mt. Terrill	14 Miles
C. Monroe Mountain	32.5 Miles
E. Koosharem	6 Miles

**KOOSHAREM (E)** — The trail between Koosharem and the Monroe Mountain Trail, is one of variations. Riders who choose to begin their journey at Koosharem are faced with a sometimes challenging climb to the top of Montrovia Mountain. Though this ride offers some tremendous scenery, the trail passes through a steep, narrow canyon and requires good riding skills. With some south facing side hills and lower elevations there may be spots of dirt and rocks showing through early and late in the season.
